What is Tokenization?

Tokenization of real-world assets (RWAs) is the process of converting physical or traditional financial assets - such as real estate, U.S. Treasuries, and commodities into digital tokens on a blockchain.

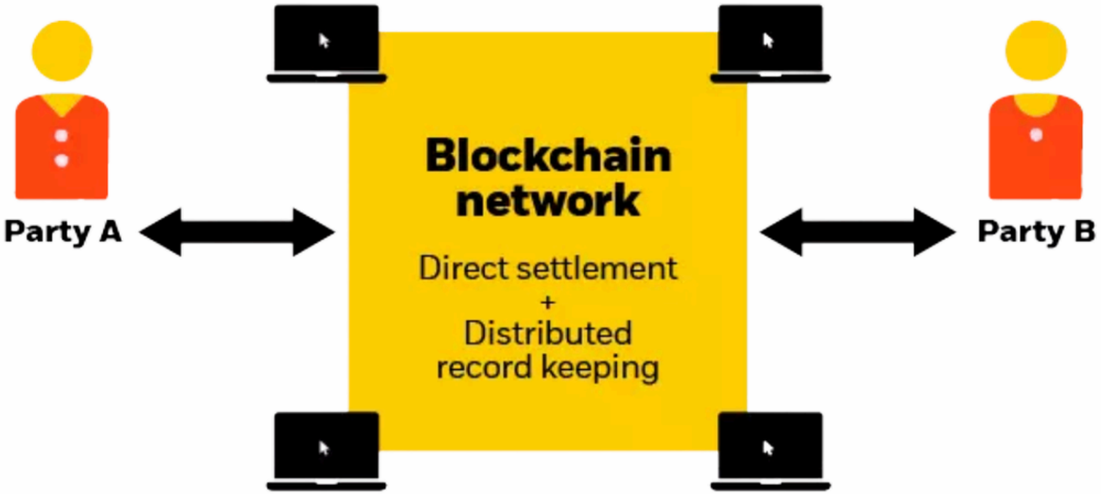

Digital markets, fragmented records

Ownership	Brokers, custodians and registries maintian separate record
Settlement	Assets delivery and payments must line up across system
Access	Eligibility, market hours and minimum size constraints

Traditional assets

Tokenized assets

1. Faster settlemement
2. Lower transaction cost
3. Fractional Ownership
4. Greater Liquidity
5. Transparency and traceability
6. Programability
7. Capital Efficiency

Reasons why tokenization

What a token represents?

Token

A blockchain record of those rights

Legal Claim

Defined rights against an issuer

Gold in a vault

Asset

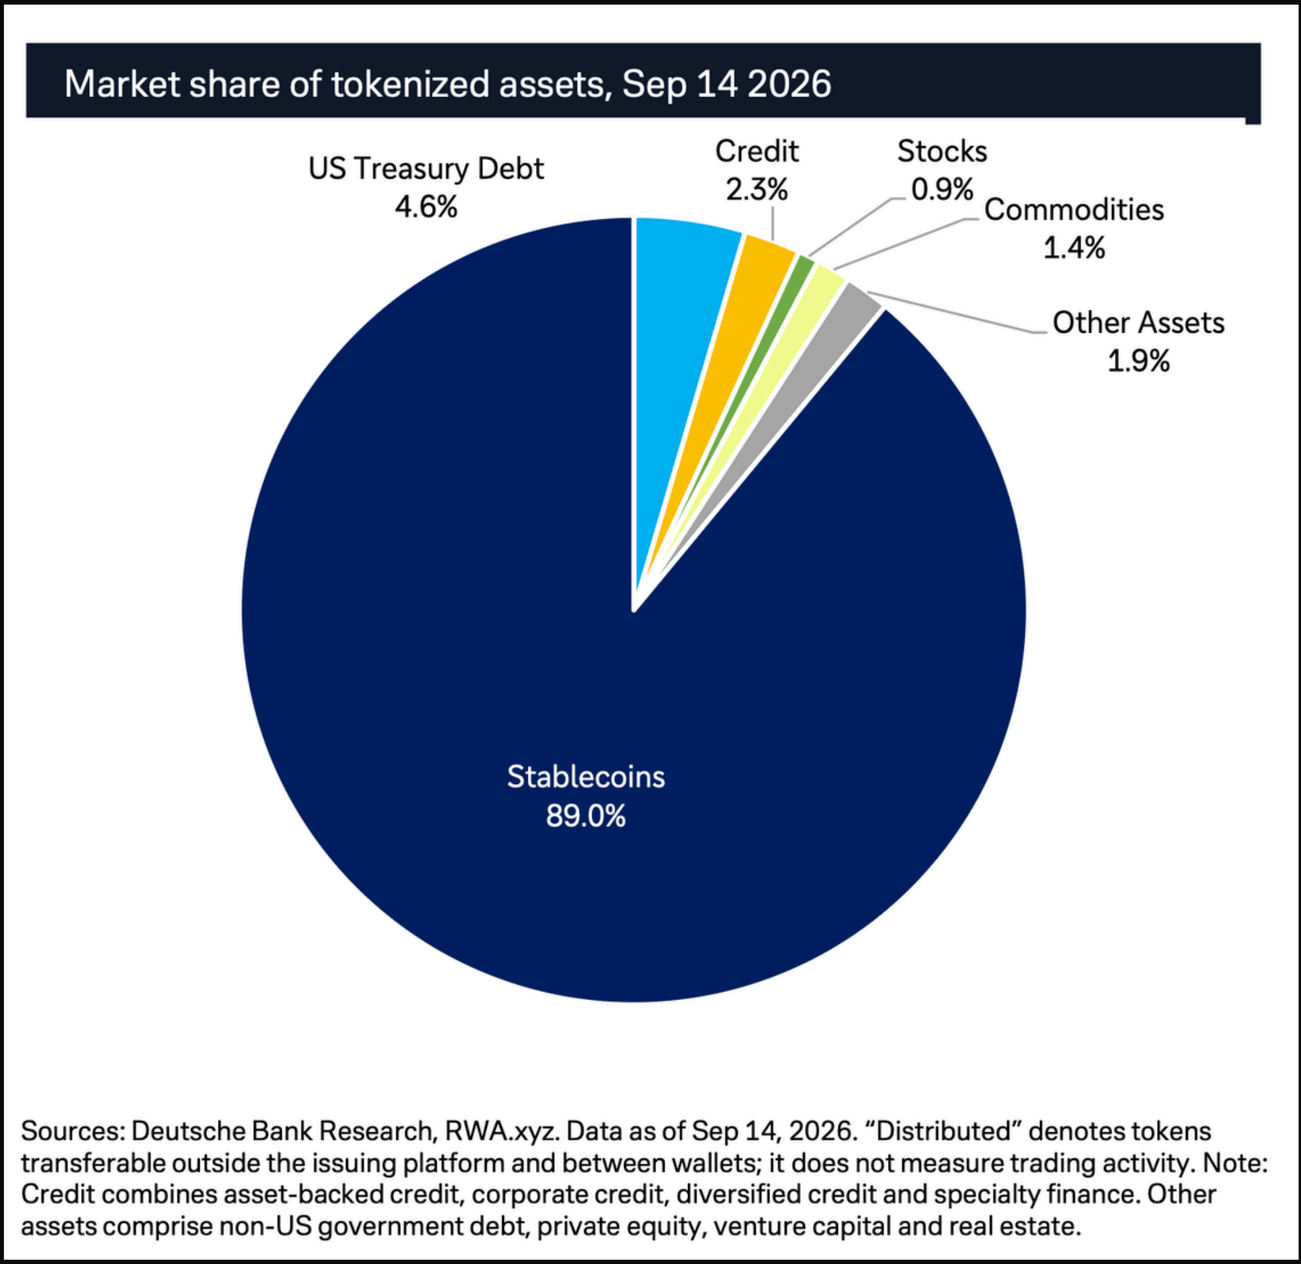

The Token lifecycle

1. **Issue**
   Verify custody and legla rights, then min the defined token supply

2. **Transfer**
   Eligible wallets exchange tokens under smart-contract rules

3. **Settle**
   Coordinate the asset payment legs on compatible infrastructure

4. **Redeem**
   Follow issuer terms to return tokens and receive the promised value

Sources: Deutsche Bank Research, RWA.xyz. Data as of Sep 14, 2026. “Distributed” denotes tokens transferable outside the issuing platform and between wallets; it does not measure trading activity. Note: Credit combines asset-backed credit, corporate credit, diversified credit and specialty finance. Other assets comprise non-US government debt, private equity, venture capital and real estate.

What is tokenized today?

Tokenization in Commodities Markets

PAX Gold (PAXG)

Tether Gold (XAU₮)

Kinesis Silver (KAG)

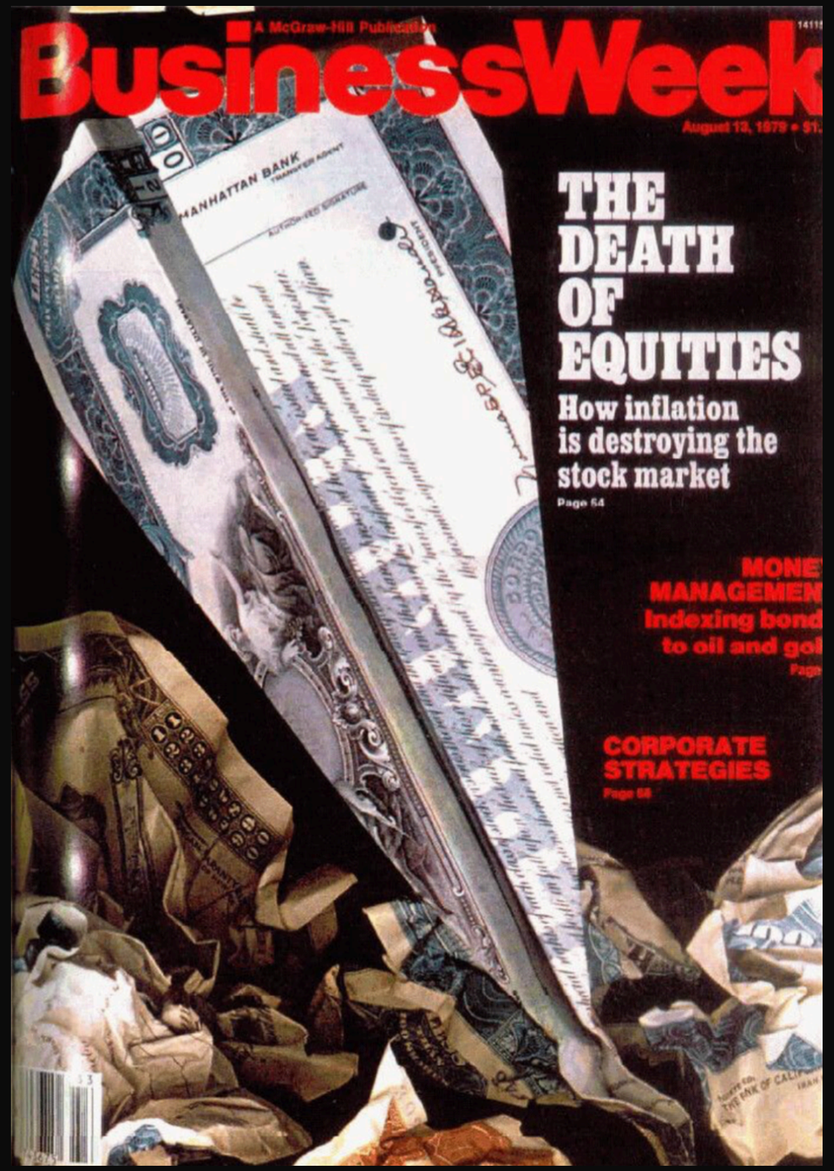

JusToken (JCORN)

Uranium.io (xU3O8)

HSBC Gold Token (XGT)

Citi Bank projects: $5.5 trillion
BCG: $14 trillion USD

Market by 2030

Upsides and downsides are ahead

The future builds slowly, then arrives all at once.
